ADD ON CERTIFICATION COURSE

AutoCAD is a general drafting and design application used in industry by architects, project managers, engineers, graphic designers, city planners, and other professionals to prepare.

If we had to define what AutoCAD is in a few words, we would say that it is a **CAD-type software oriented to drawing and modeling in 2D and 3D**. It allows the creation and modification of geometric models with an almost infinite capacity to develop all types of structures and objects.

This ability to work in different fields has made AutoCAD transcend its traditional use in the world of architecture and engineering, to enter the world of graphic and interior design.

Currently, AutoCAD has a multitude of specialized auxiliary tools which cover every kind of industrial fields related to 2D design and 3D modeling

ADD ON CERTIFICATION COURSE

STAAD Pro helps structural engineers to automate their tasks by removing the tedious and long procedures of the manual methods. It allows civil engineers to analyze and design various types of structures on virtual platforms. Structural engineering firms, consultancies, various departments of construction companies, and government firms use STAAD pro extensively. Today, many online platforms and apps provide certification in STAAD Pro that gives complete knowledge on this designing software. To learn this dynamic software, you don't need a special degree or something; however, having a Civil Engineering is a must to pursue this course.

Suppose you plan to make a career in structural designing; however, you don't have sufficient time to attend traditional offline classes. In this case, you can opt for an online certification program from a reputable institute or tech educational platform for STAAD Pro training.

It is really helpful for individuals who are working as professional or full-time students. Online training will offer the flexibility to learn at your own pace and convenient location. You decide your learning hours and the best time suitable for it.

Number of students attended: 62

Number of students completed the course: 62

Topics Discussed:

C- Based VLSI Design is mainly targeted at HW designers who want to learn how to synthesize and verify behavioral descriptions given in ANSI – C into RTL.

It helps the students to understand the overall HLS (High Level Synthesis) flow.

Course objectives:

- This course focuses on C-based design based on High-level synthesis, including how to verify these designs and co-verify legacy RTL blocks with newly developed C- based design processes.
- To get knowledge on verilog HDL programming and ability to design digital systems.
- To design and analyze the clocked synchronous.
- To learn basic CMOS circuits.

Course outcomes:

- Identify the various IC fabrication methods.
- Express the layout of Simple MOS Circuit using Lambda based design rule.
- Students learn to realize Digital VLSI circuits using verilog HDL in FPGA.

A 40 hour duration course was conducted for students. The course content was customized to address the needs of the students. The program is designed for enabling the students to learn the techniques of chip design using programmable devices. The students learnt the basic CMOS circuits. The students participated in the course very enthusiastically and gave a positive feedback.
