SRK Institute of Technology, Enikepadu, Vijayawada – 521108, Andhra Pradesh, (herein after called SRKIT) is affiliated to Jawaharlal Nehru Technological University, Kakinada, Andhra Pradesh. SRKIT has taken a progressive step in the field of sanitation by initiating actions for incorporating Open Defecation Free ++ (ODF ++)/ Faecal Sludge and Septage Management (FSSM) in the certification program soon to be launched at SRKIT. Also, it is decided to take a step towards sensitizing motivated students working in the field of FSSM. This would go a long way in realizing the vision of making Andhra Pradesh an ODF++ state.

SRKIT herewith has taken yet another progressive step towards girl students. Despite growing number of girl students in engineering streams, there is still a gender gap that needs to be bridged. In this regard, it is decided to take a step in sensitizing the community on the need for empowerment of women. Also, if girl students are trained as change makers for environment related issues, it will go a long way in protecting the environment and society.

Administrative Staff College of India (herein after called ASCI) is a leading institution offering training, research and consultancy services in the field of urban management (amongst other areas) with a focus on urban sanitation and water. The ASCI is a knowledge partner to Government of Andhra Pradesh (GoAP) for helping the state achieve its urban sanitation goals. The ASCI has established a Technical Support Unit (TSU) at Swachha Andhra Corporation which also supports the Commissioner and Directorate of Municipal Administration (CDMA) in implementing the Faecal Sludge and Septage Management (FSSM) policy and all the activities within that. With a view to sustain the sanitation improvements being undertaken by the GoAP, ASCI is committed to build the capacities of academic and research institutes of repute.

The Memorandum of Understanding covers the following points:

1. ASCI to support SRKIT in developing syllabus and support material to introduce

PROGRAM REPORT

Date: 21-06-2021

Title of the Program: An Online Seminar on "FAECAL SLUDGE & SEPTAGE MANAGEMENT- AN APPROACH FOR SAFER ENVIRONMENTAL SANITATION"

Resource person : Sri Uday Singh Gautam, State Program Manager & Sanitation Expert, ASCI stationed at Vijayawada, Andhra Pradesh. Ph.no.9849333311.

Guests: Dr. Malini Reddy & Dr. Priyanka Reddy
Members of ASCL, Hyderabad

Duration : 2hours (11:00AM to 01:00PM)

No. of Participants : 124

Organized by: Department of Civil Engineering, SRKIT.

Collaboration: Conducted in association with Administrative Staff College of India, Hyderabad (ASCE) as a part of the MoU signed with the Institute.

Description : Sanitation in India is a key to achieving improved public health and enhanced socio-economic outcomes. To achieve this objective, Ministry of Urban Development has launched two key schemes namely, Swachh Bharat Mission (SBM) and Atal Mission for Rejuvenation & Urban Transformation (AMRUT). While SBM aims to end open defecation by universalizing construction and use of toilets, AMRUT is aimed at strengthening the sewerage and water supply network of the country. Both schemes aim to holistically address the existing gaps under the sanitation value chain in India.

At present, the penetration of sewerage systems is low in the country and more than 45% of urban Indian households are dependent on On-Site Sanitation (OSS) systems. Thus, till the time the Government's vision of 100% sewerage universalization is

achieved, it is felt that faecal sludge output needs to be managed in an environmentally safe and sustainable manner using complementary and alternative methods of treatment. In view of this, the Ministry of Urban Development is launching the National Policy on Faecal Sludge and Septage Management (FSSM) to facilitate nationwide implementation of FSSM in India.

Main Objective: To impart knowledge on all the important aspects of Faecal Sludge for the design and operation of a comprehensive FSSM system.

Broad Objectives:

1. To ensure that all benefits of wide access to safe sanitation accrue to all citizens across the sanitation value chain with containment, extraction, transportation, treatment, and disposal / re-use of all faecal sludge, septage and other liquid waste and their by-products and end-products.
2. To promote access for households to safe faecal sludge and septage management facilities (including proper disposal arrangements).
3. Suggest and identify ways and means, including the methods and resources, towards creation of an enabling environment for realising safe and sustainable FSSM in India.

Content covered by the Resource Person:

- ✓ Design of septic tanks, pits etc. (adapted to local conditions), including siting, and methods of approval of building plans, or retro-fitting existing installations to comply with rules and byelaws.
- ✓ Delineation of private (individual houses, groups housing, institutions etc.) and public responsibilities (urban local bodies and other local authorities) in relation of faecal sludge and septage management.
- ✓ Details of the planning and implementation process for carrying out safe and sustainable management of all faecal sludge and septage. This may be integrated with overall city land use planning, with the timelines for holistically addressing waste water management via on-site, decentralised or centralised systems.
- ✓ Special provisions for medium and large format real estate developments.
- ✓ Frequency of desludging, and O&M of installations and the responsibilities of householders (owner/occupant).

- ✓ Operating procedures for desludging including safety procedures with an emphasis on the safety, health and dignity of sanitation workers.
- ✓ Licensing, record-keeping, monitoring and reporting arrangements for faecal sludge and septage service providers.
- ✓ Methods and locations of transport (conveyance), treatment and safe disposal.
- ✓ Tariffs or cess/tax etc. for septage management in the city. Penalty clauses for untreated discharge for households as well as desludging agents and unsafe emptying and handling of faecal waste.
- ✓ Regular monitoring and evaluation of the entire process of FSSM.
- ✓ Training, accreditation, education and awareness programs.

VISION

All Indian cities and towns become totally sanitized, healthy and liveable and ensure sustenance of good sanitation practices with improved On-site Sanitation services together with FSSM to achieve optimum public health status and maintain clean environment with a special focus on the poor.

Outcomes:

1. Have an understanding of the treatment, management, and planning aspects related to FSM, and how they interact;
2. Comprehend the importance of proper sludge characterization for optimal collection and transport, treatment and reuse;
3. Apply engineering fundamentals to design systems for management and treatment of faecal sludge;
4. Place FSM in an urban waste management context for sustainable and feasible planning of FSM systems.

మూడు-కుండల ద్వారా కంపోస్టింగ్ పద్ధతి

కుటుంబం నిర్మూల యొక్క నిర్బంధను బట్టి కుండల సంఖ్యను నిర్ణయించవచ్చు. సాధారణంగా, మూడు కుండలను ఉపయోగిస్తారు. ఒకదానిని ఒకటి వేర్వేరు చేయవచ్చు.

పైన మరియు మధ్య కుండలను పారాపరీక ద్వారా వేరు చేయాలి. కిక్కురుతున్న నుండి గాలి ప్రవేశించడానికి స్థలాన్ని అందిస్తుంది.

పేపర్ (కంపోస్టింగ్ పదార్థం ద్వారా నిడుదలయ్యే వీరు) యూనిట్ A మరియు యూనిట్ B లను పేపర్ చేస్తుంది. దీనిని యూనిట్ C ని చేరుకోవే సరికి దాదాపుగా అక్కడి కంపోస్ట్ ద్వారా ప్రసావించబడుతుంది.

Don't fill more than 3/4th of each unit with waste at one time.

newspaper sheets in the top and middle units acts as separators & provides the space for air to enter from the bottom of the pile of composting.

Air / oxygen gets into the 3 units through the holes.

Waste is first filled in Unit A. When Unit A gets 3/4th full, and Unit B moves to the top. Waste is now dumped in Unit B. While this is happening the waste in Unit A reduces in volume. This is then transferred to Unit C after Unit B is 3/4th full. Unit A is now empty and ready to be placed on top. Unit B is shifted to the middle.

This cycle repeats.

ఇది మరల పునరావృతమవుతుంది.

The leachate (water discharged by composting matter) filters down Unit A and Unit B to reach the bottom Unit C to be absorbed by the almost

1. **Tampon:** Tampons are absorbent materials made from cotton and/or rayon that are inserted in the vagina to absorb menstrual flow. They expand with moisture and thereby avoid leakage. They can be worn for up to 8 hours, come in variety of sizes and are biodegradable.
2. **Menstrual Cup:** The menstrual cup is a non-absorbent bell-shaped device that is inserted in the vagina to collect menstrual flow. It is typically made of medical-grade silicone. It collects three times more blood than pads or tampons and needs to be emptied every 6-12 hours. After each menstrual cycle the cup must be disinfected in boiling water for 5-10 minutes. Cups are reusable for 5-10 years.

WHAT CHALLENGES DO GIRLS MY AGE FACE WITH REGARD TO MENSTRUATION?

LACK OF SAFE AND PRIVATE SPACES

Lack of availability of safe, private and clean toilets for changing/ menstrual products during the day and night.

EMBARRASSMENT & ANXIETY

Blood stains on clothing and worry about menstrual leaks prevent girls and women from undertaking normal day to day activities.

LACK OF INFORMATION

The absence of basic menstrual hygiene and health education lead to ill health.

TABOOS & RESTRICTIONS

Traditional perceptions of menstruation as dirty, unclean and health-threatening prevent girls and women from seeking help and using menstrual products. This is often due to the lack of information and education on the proper use of menstrual products and the importance of menstrual health.

Education about menstruation changes everything.

The incinerators are available of two types:

1 Manually operated fire based incinerators

Electrically Operated Incinerators

Incinerator is a Sanitary Napkin destroyer where used napkins are converted into sterile ash. The incinerator under high temperature burns the discarded material to produce ash and minimal amount of smoke which is removed through an air vent.
