PREZI:

Prezi is a presentation tool that can be used for presenting ideas/ slides on a virtual campus.

PREZI SUMMARY:

This specific software is used as a practically a story teller tool for presenting any information you desire to. Prezi also has the zooming user interface which is you can zoom into certain things on templates.

ADVANTAGES:

Free:- Unlike PowerPoint, Prezi is free to obtain in any computer.

Movement- When presenting anything on this software you can have things move around

Age- Any person of any ages are able to use Prezi since it is not complicated.

USING PREZI:

When starting of a new presentation in Prezi all you have to do is pick any template of your choice. Afterwards just put any information you want through your presentation.

> Prezi is great for presentation where you have to go with the flow and be able to jump from one topic to another. In a way, Prezi is more like a conversation.

STEP BY STEP PROCEDURE FOR CREATING A PRESENTATION ON PREZI:

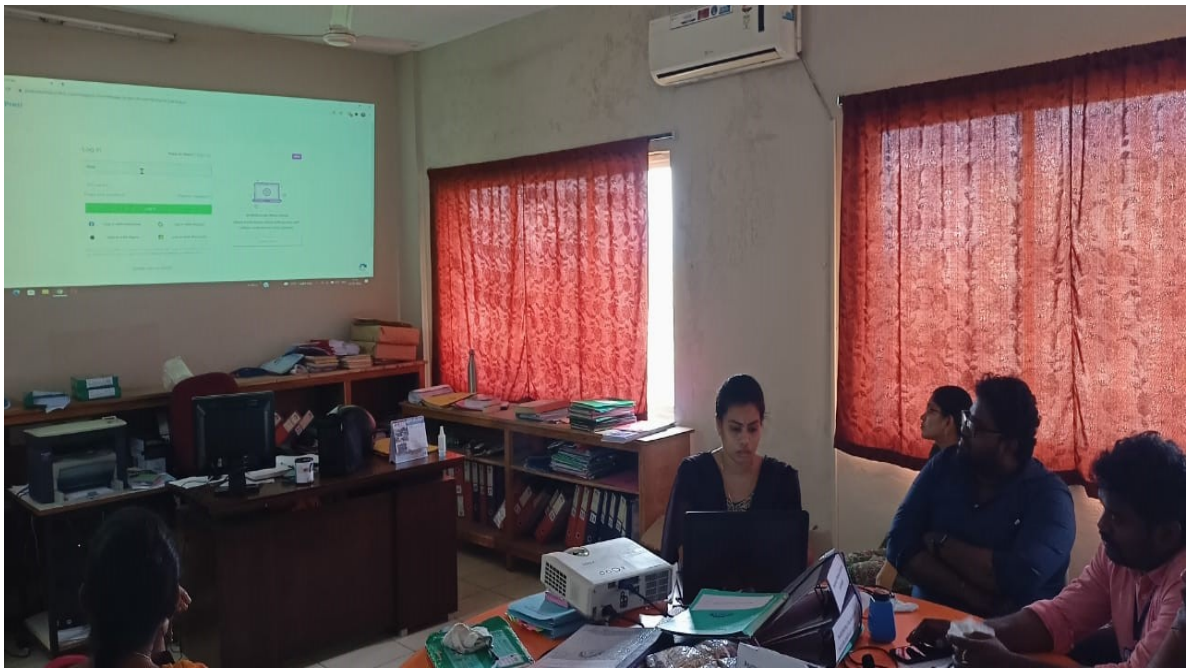
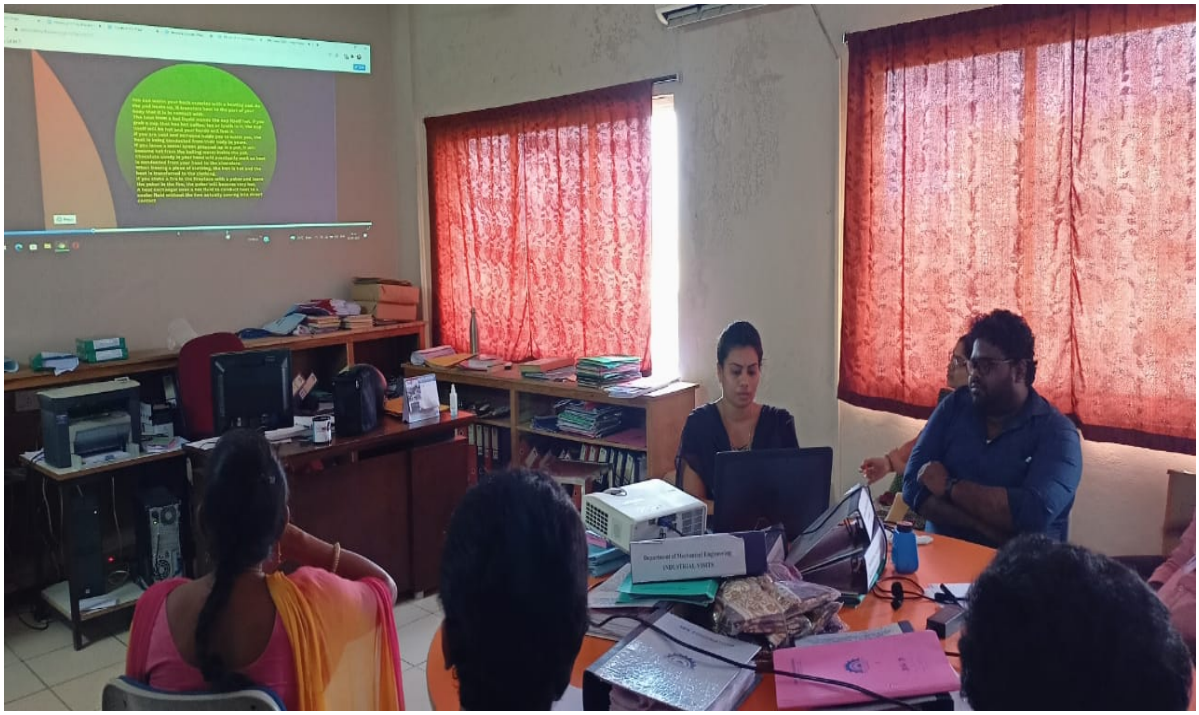
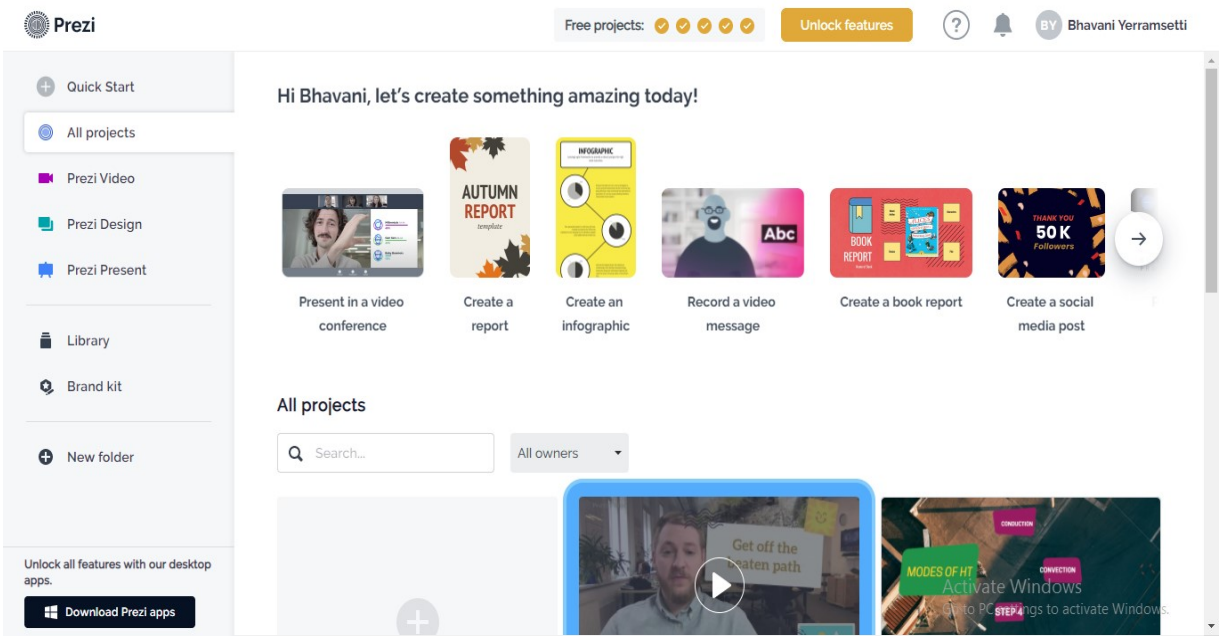
CREATING AWARENESS ON PREZI FOR THE FACULTY:

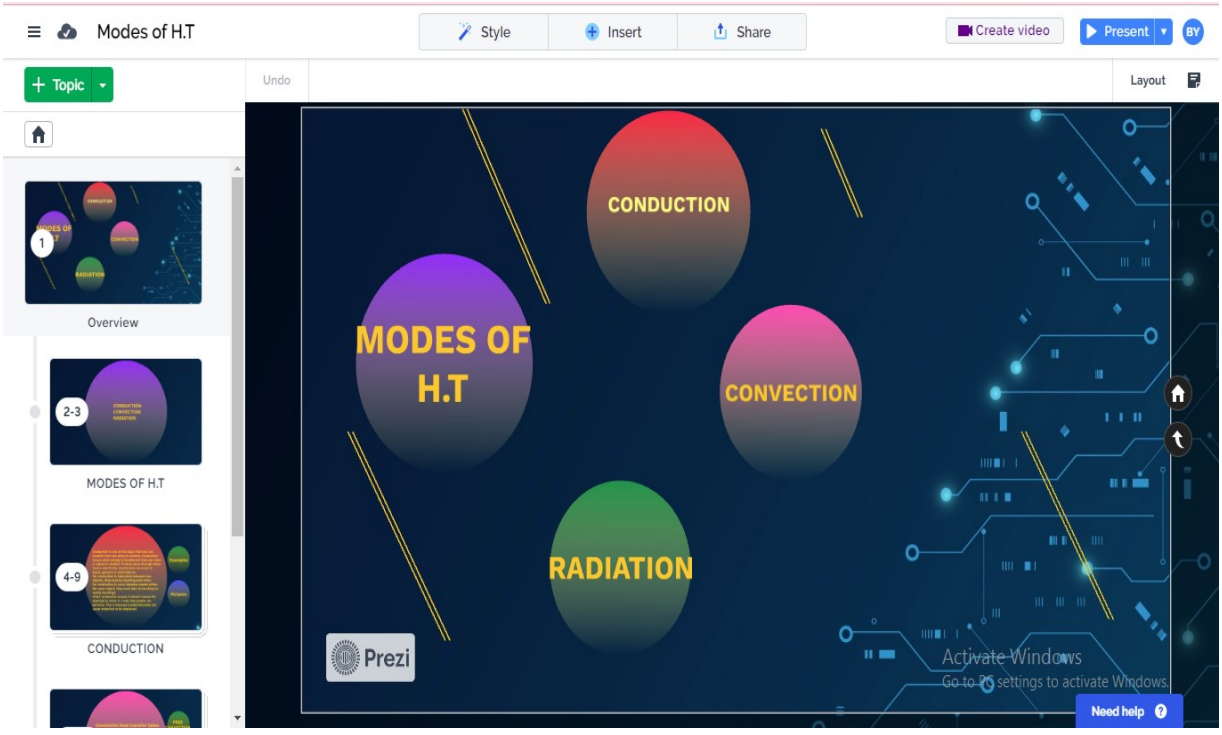




Convection heat transfer takes place if a fluid moves over a solid surface or in the vicinity of it, given that there is a difference in temperature between the fluid and the solid surface.
FREE CONVECTION
FORCED CONVECTION

FACULTY USING PREZI TOOL:





Modes of H.T

Edit

You can warm your back muscles with a heating pad. As the pad heats up, it transfers heat to the part of your body that it is in contact with.
The heat from a hot liquid makes the cup itself hot. If you grab a cup that has hot coffee, tea or broth in it, the cup itself will be hot and your hands will feel it.
If you are cold and someone holds you to warm you, the heat is being conducted from their body to yours.
If you leave a metal spoon propped up in a pot, it will become hot from the boiling water inside the pot.
Chocolate candy in your hand will eventually melt as heat is conducted from your hand to the chocolate.
When ironing a piece of clothing, the iron is hot and the heat is transferred to the clothing.
If you stoke a fire in the fireplace with a poker and leave the poker in the fire, the poker will become very hot.
A heat exchanger uses a hot fluid to conduct heat to a cooler fluid without the two actually coming into direct contact
